Task I – Setting Priorities

Bugs are an everyday part of our lives, unfortunately, we have to let them go.

Here is a sample list of bugs that you've received from trivago's website and you have to work with the product owner to rank them according to their importance (Urgent, High, Normal, Low).

Could you set their priority? Please also provide your arguments.

1. Clicking on "View Deal" you get redirected to a wrong OTA item landing page
2. Pagination on search results page doesn't work
3. Country flag for US is wrong
4. Price filter returns incorrect results
5. Sorting by distance to city center doesn't work
6. Results take too long to load when searching for a 5 star hotel with spa in Belarus
